ROTO SILENTA 630 RS

BLOOD BAGS / ALL STANDARD TUBES / BOTTLES / FLASKS

Open chamber and dual temperature sensors for an optimal sample environment. A non-windshielded chamber allows for unimpeded air flow offering faster and more efficient cooling. The robust temperature control system delivers true "at-sample" temperatures regulated with high accuracy dual-temperature sensors. Its low deck height and open chamber provide easy access to the centrifuge rotor for ergonomic loading and unloading. Open access to the centrifuge chamber simplifies the cleaning process and reduces regular maintenance.

One rotor for both 6 and 12-place whole blood processing saving time and money. The ROTO SILENTA offers both single and double buckets for use in the same rotor, providing greater flexibility no matter the work-flow.

High quality inserts for greater productivity, less breakage and less replacement costs. Inserts are wide, deep and easy to handle. The inserts protect the full length of the bag while whole blood bags slide effortlessly into the cup when loading and unloading.
